Palm Springs, California

## **Energy Benchmarking in Cleanrooms**

**William Tschudi  
Lawrence Berkeley National Laboratory**

## *A HOT TOPIC*

---

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

3

## *A Hot Topic*

---

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

4

## ***Why Benchmark High-tech Buildings?***

---

PG&E saw that the market was large and growing. In California:

- 9400 GWH in 1997 (all high tech buildings)
- 4.2 million sq. ft. of operating cleanrooms
- Semiconductor and Biotech exhibited high growth

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

5

## ***Why Benchmark High-tech Buildings?***

---

Cleanroom owners and operators saw an opportunity to learn about their energy end use, compare their efficiency to others, and find some efficiency improvement opportunities.

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

6

## ***Why Benchmark Cleanrooms?***

---

- Identify energy efficiency opportunities
- Discover Operational and Maintenance problems
- Determine best practices to influence retrofit or new construction
- Reduce electrical demand to improve reliability and room for growth

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

7

## ***Benchmarking Process***

---

- General plan – informs participants
- Enlist Benchmarking participants
- Site specific plan
- On-site measurement and data collection

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

8

## ***Communicating Results***

---

- Participant review of draft site report
- Final participant report and anonymous version
- Database updated and summarized on LBNL web site along with anonymous reports

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

9

## ***What is a cleanroom?***

---

- A space with a controlled environment usually for contamination control
- Cleanliness is achieved by moving large amounts of air through HEPA filters
- Cleanrooms come in varying degrees of cleanliness – called cleanliness class
- Cleanliness class dictates air change rates

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

10

## Semiconductor Cleanroom

## Additional Energy Drivers

- Hazardous materials are often used in processes housed in cleanrooms requiring lots of exhaust
- Processes in cleanrooms often require tight temperature and humidity control

## *Need for common metrics*

- Ability to compare performance regardless of process
- Focus on system efficiency rather than production efficiency

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

13

## *Cleanroom metrics*

- Air Systems – cfm/kW
- Cleanroom air changes – ACh/hr
- Air velocity in cleanroom - ft/sec

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

14

## **Central Plant metrics**

---

### Chilled water efficiency – kW/ton

- Chiller
- Cooling tower
- Pumping – Chilled water, Condenser water, hot water

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

15

## **Energy Benchmarks Data Base**

---

- Anonymous reporting
- System comparison
- Component comparison
- Comparison of overall facility
- No production metrics

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

16

## Cleanroom Benchmarking

### The Results

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

17

## Energy End Use

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

18

## Energy End Use

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

19

## Process load Issues

- Total electrical loads vary greatly depending upon the process in the room
- Electrical load is converted to heat which is removed by HVAC and process cooling systems
- Estimating the process heat load is a challenge
- HVAC equipment sized correctly operates more efficiently
- Benchmark data can help determine real design loads for use in future projects

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

20

## Energy Intensive systems

### Recirculation in cleanrooms

June 2-5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

21

## Recirculation Efficiencies

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

22

## Recirculation System Findings

- Energy use for recirculation systems varied by as much as a factor of 10
- Plenum systems (low pressure drop) were generally more efficient
- Ducted systems (high pressure drop) were less efficient
- Fan-filter units were relatively inefficient (but are improving)

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

## A Ducted System

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

26

## Observations

---

- Large variations exist
- Designers, Owners, and Facility staff do not know what is possible to attain
- Or how they are operating
- There is generally a lack of monitoring instrumentation

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

27

## My Recommendation

---

Designers (and constructors) will provide what their customers ask for.

If you want efficient systems, ask for them.

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

28

## What is the cost impact?

Annual energy costs - recirculation fans  
(Class 5, 20,000ft<sup>2</sup>)

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

29

## Make-up Air Comparison

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

30

## Why is make-up air system efficiency lower?

- Retrofitted systems with less than optimal configurations
- High face velocity air handlers (due to space constraints or just inattentive design)
- Older less efficient equipment (motors, fans)
- Resistance due to heating and cooling coils, filters, etc.
- Duct sizing and layout

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

31

## *A Typical Make-up Air Handler*

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

32

***Why are Design Efficiencies less than Measured Efficiencies?***

Design efficiency is generally understated because larger power consumption (kW) is generally assumed.

June 2 -5, 2002 [www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov) 34

## Make-up Air System Considerations

- ✦ Optimize exhaust and pressurization
- ✦ Minimize resistance of make-up air path
- ✦ Close coupling large equipment
- ✦ Reduce air handler face velocity
- ✦ Select efficient fans and motors
- ✦ Use VFD controls

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

35

## Air-Change Rate Comparison

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

36

## Air Change Rate and Velocity Observations

- Again, wide variation
- All processes had acceptable yields (so why do some work with less airflow?)
- Some air flows exceed recommended ranges (IEST provides recommendations based upon historical adequacy – not science based)
- Air velocity reduction and ceiling filter coverage represent opportunities

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

37

## Chilled Water Systems Comparison

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

38

## Chiller Comparison

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

39

## Chilled Water System Observations

- Wide variation in overall efficiency
- Surprise! Measured chiller efficiency is different than name plate
- Pumping energy can be significant and excessive
- Chiller performance dominates
- Water Cooled chillers are more efficient

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

40

## My conclusion:

Existing efficiency information for chilled water plants is under-utilized.

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

41

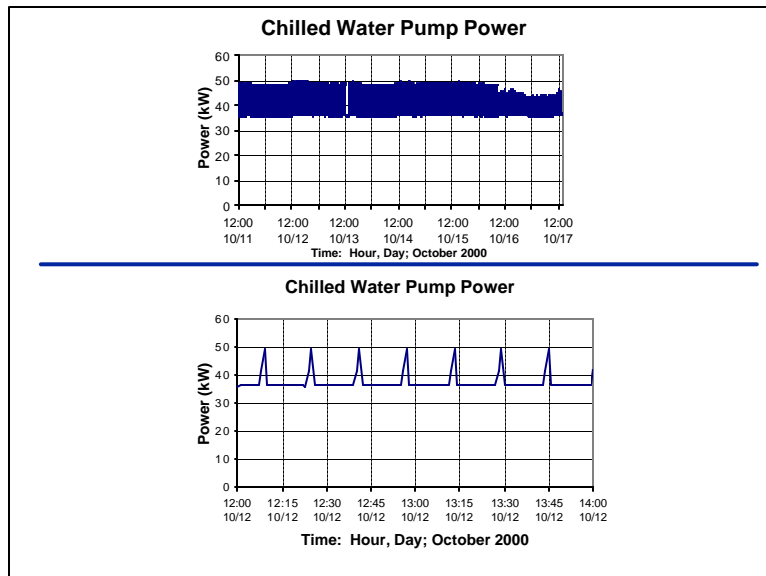

## Non-energy benefits of Benchmarking

- Maintenance problems are discovered
- Operational inefficiencies are revealed
- Reliability can be improved
- Safety issues can be discovered

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

42

## Benchmarking Can Help Establish Efficiency Goals

- Energy Budget
  - Total facility
  - End use
- Efficiency Targets for key systems/components
  - Cfm/KW
  - KW/ton
  - Pressure drop

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

44

## Benchmarking Identified New Efficiency Concepts

For Cleanrooms:

- Match cleanliness to contamination problem
- Investigate reduction in air change rates
- Optimize chilled water pumping
- Optimize flow resistance

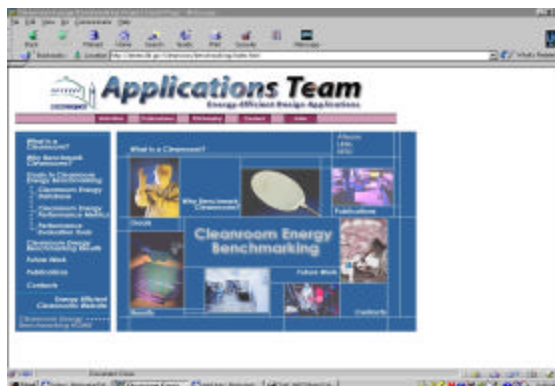

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

## Cleanroom Benchmarking Website

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)

46

*Thank You*

June 2 -5, 2002

[www.energy2002.ee.doe.gov](http://www.energy2002.ee.doe.gov)
